

The complete terrace
system designed for life.

Part of the Kinley Family

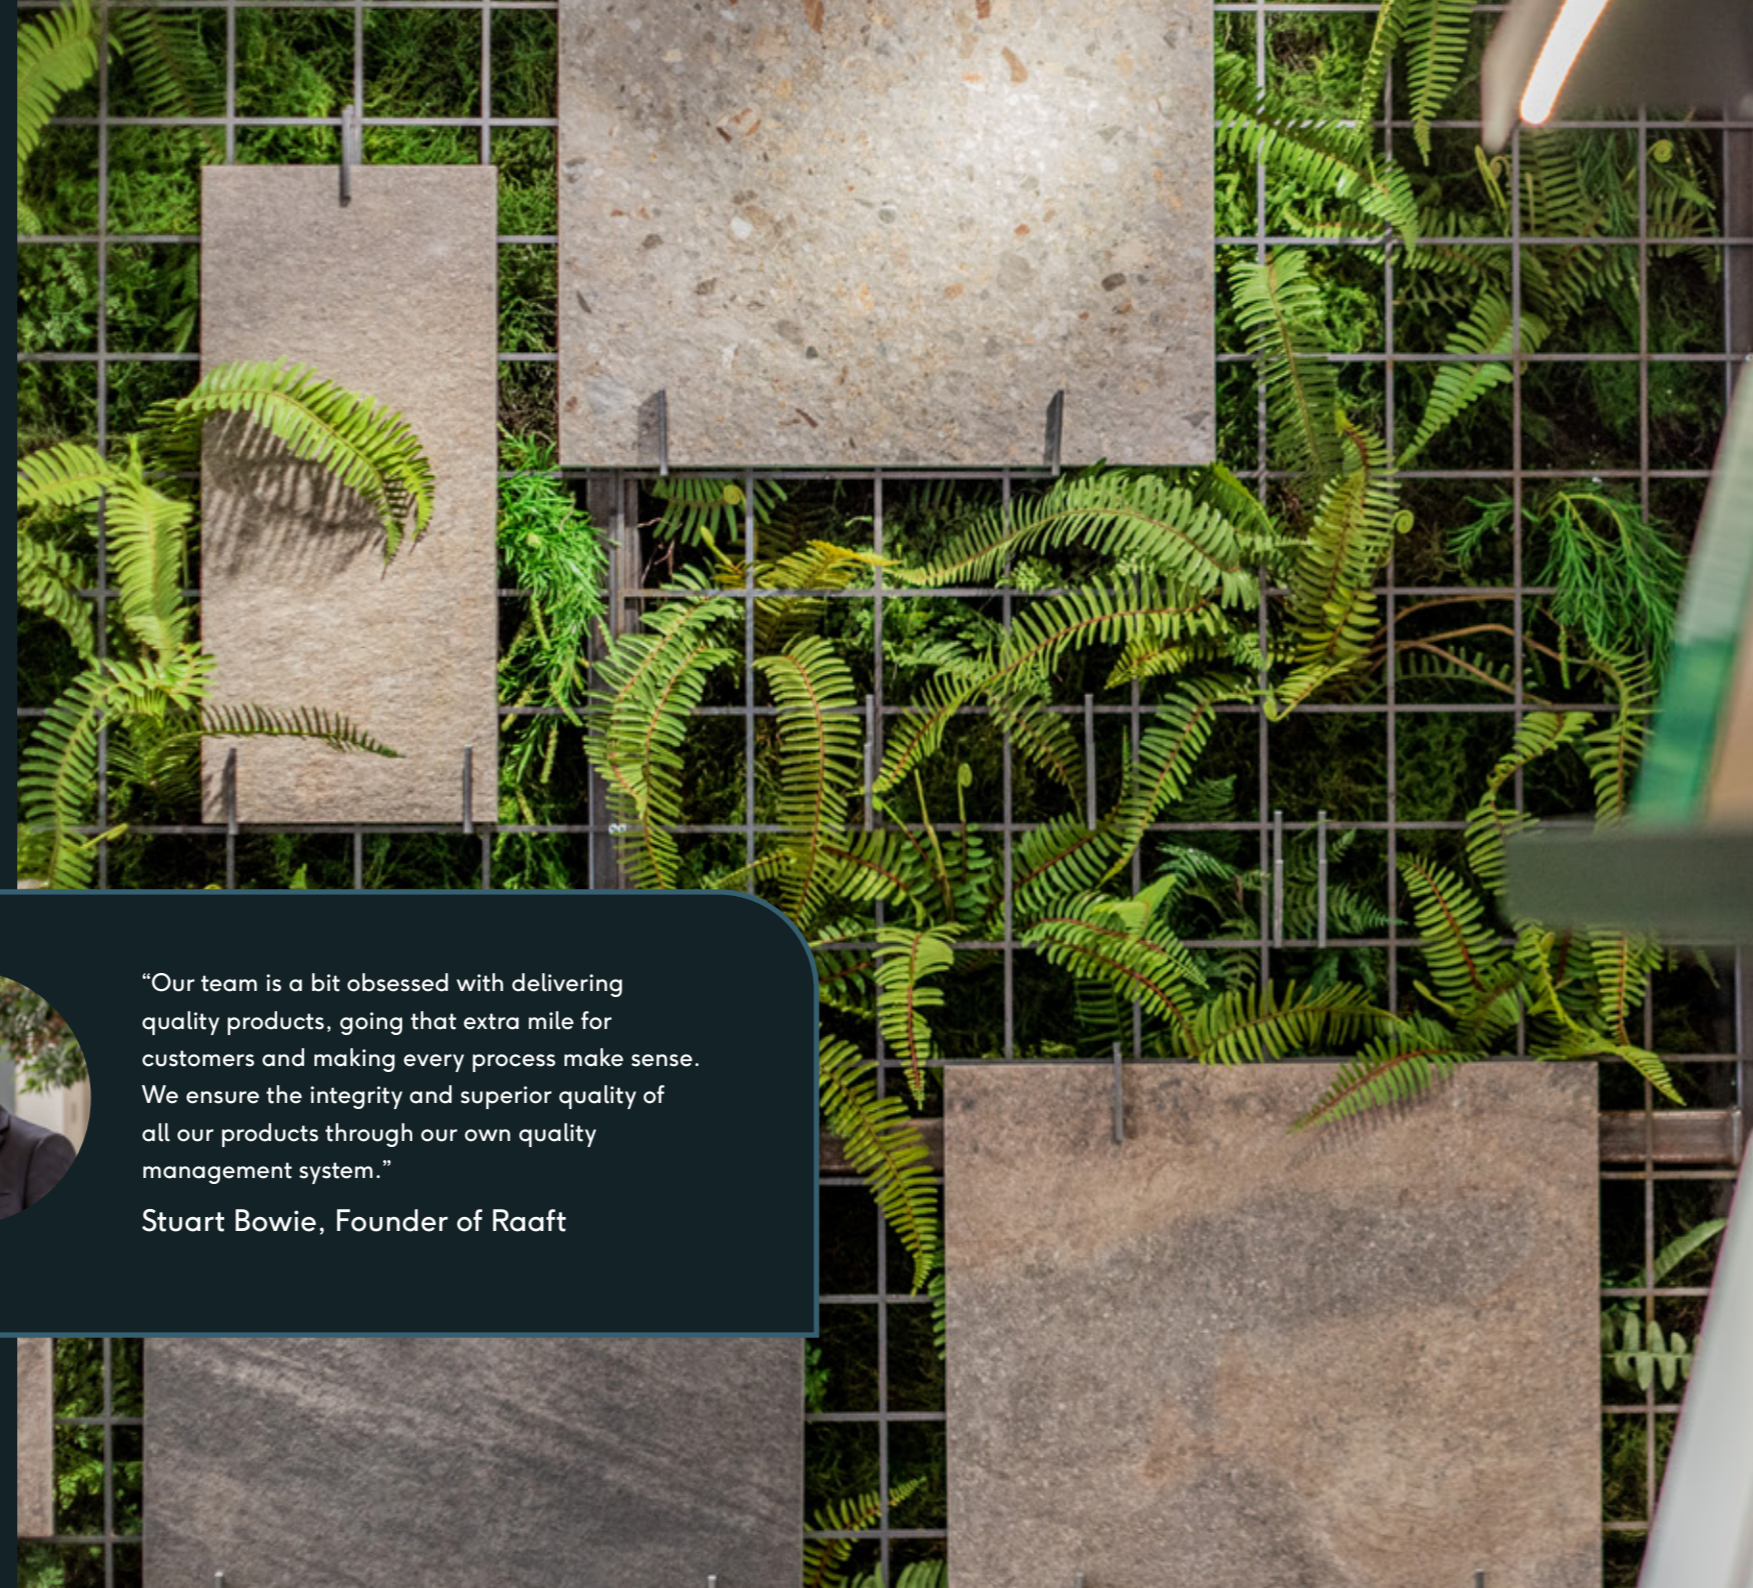

About Raaft

We enable design creativity and reduce risk through providing a complete, customisable roof terrace fit-out system, engineered to work together and last for a lifetime.

“Our team is a bit obsessed with delivering quality products, going that extra mile for customers and making every process make sense. We ensure the integrity and superior quality of all our products through our own quality management system.”

Stuart Bowie, Founder of Raaft

Inspiration

Tailors Corner

Leeds, LS1

Tailors Corner is one of Leeds' most iconic city centre landmarks, and its refurbishment required contemporary design without detracting from the building's original grandeur. A key new feature is a roof garden for the sole use of the sixth-floor occupier, and the landscape architect wanted this to be a garden in its truest sense.

Inspiration

135 Bishopsgate

London, EC2M

A dynamic refurbishment of the property has transformed the two-story reception area, replacing the original balustrading and staircases with a new public realm of landscaped steps and ramps for improved access. Three terraces have also been created on levels 7, 8 and 10 to provide 3,500 square feet (325 square metres) of shared rooftop amenities for occupants.

What do we do?

We enable design creativity and reduce risk through providing a complete, customisable roof terrace fit-out system, engineered to work together and last for a lifetime.

RaafT Terrace System

Our intuitive modular terrace system can easily be constructed in a simple three step process.

Step 1

Building a good base

A good quality support structure is key to creating a sturdy, safe terraced area. As roofs are rarely flat or level, our RaafT system is the perfect solution.

Step 2

Choosing your surface

Our surface range is designed to overcome any design challenge and includes Terrafina Composite Decking, Farrino Fire-rated Porcelain Decking and Atria Porcelain Tiles, all of which are available in different finishes to compliment any design.

Step 3

Adding dimensions

A terrace can easily be transformed into a garden with layers of interest and a feeling of permanence by adding planters that are available in a variety of standard and bespoke options.

Support Structures

Building a good base

- Adjustable Pedestals
- Fire Rated Pedestals
- Joists
- Floor Structure Panels

Surfaces

Choosing your deck

- Terrafina
- Atria
- Farrino

Planters

Adding dimension

- Standard Planters
- Bespoke Options

The Kinley Design Studio

Based in Clerkenwell, London, in the centre of UK's architectural creativity and industrial design hub, our Design Studio showcases the Raaft terrace system and the variety of floor and steel planter finishes.

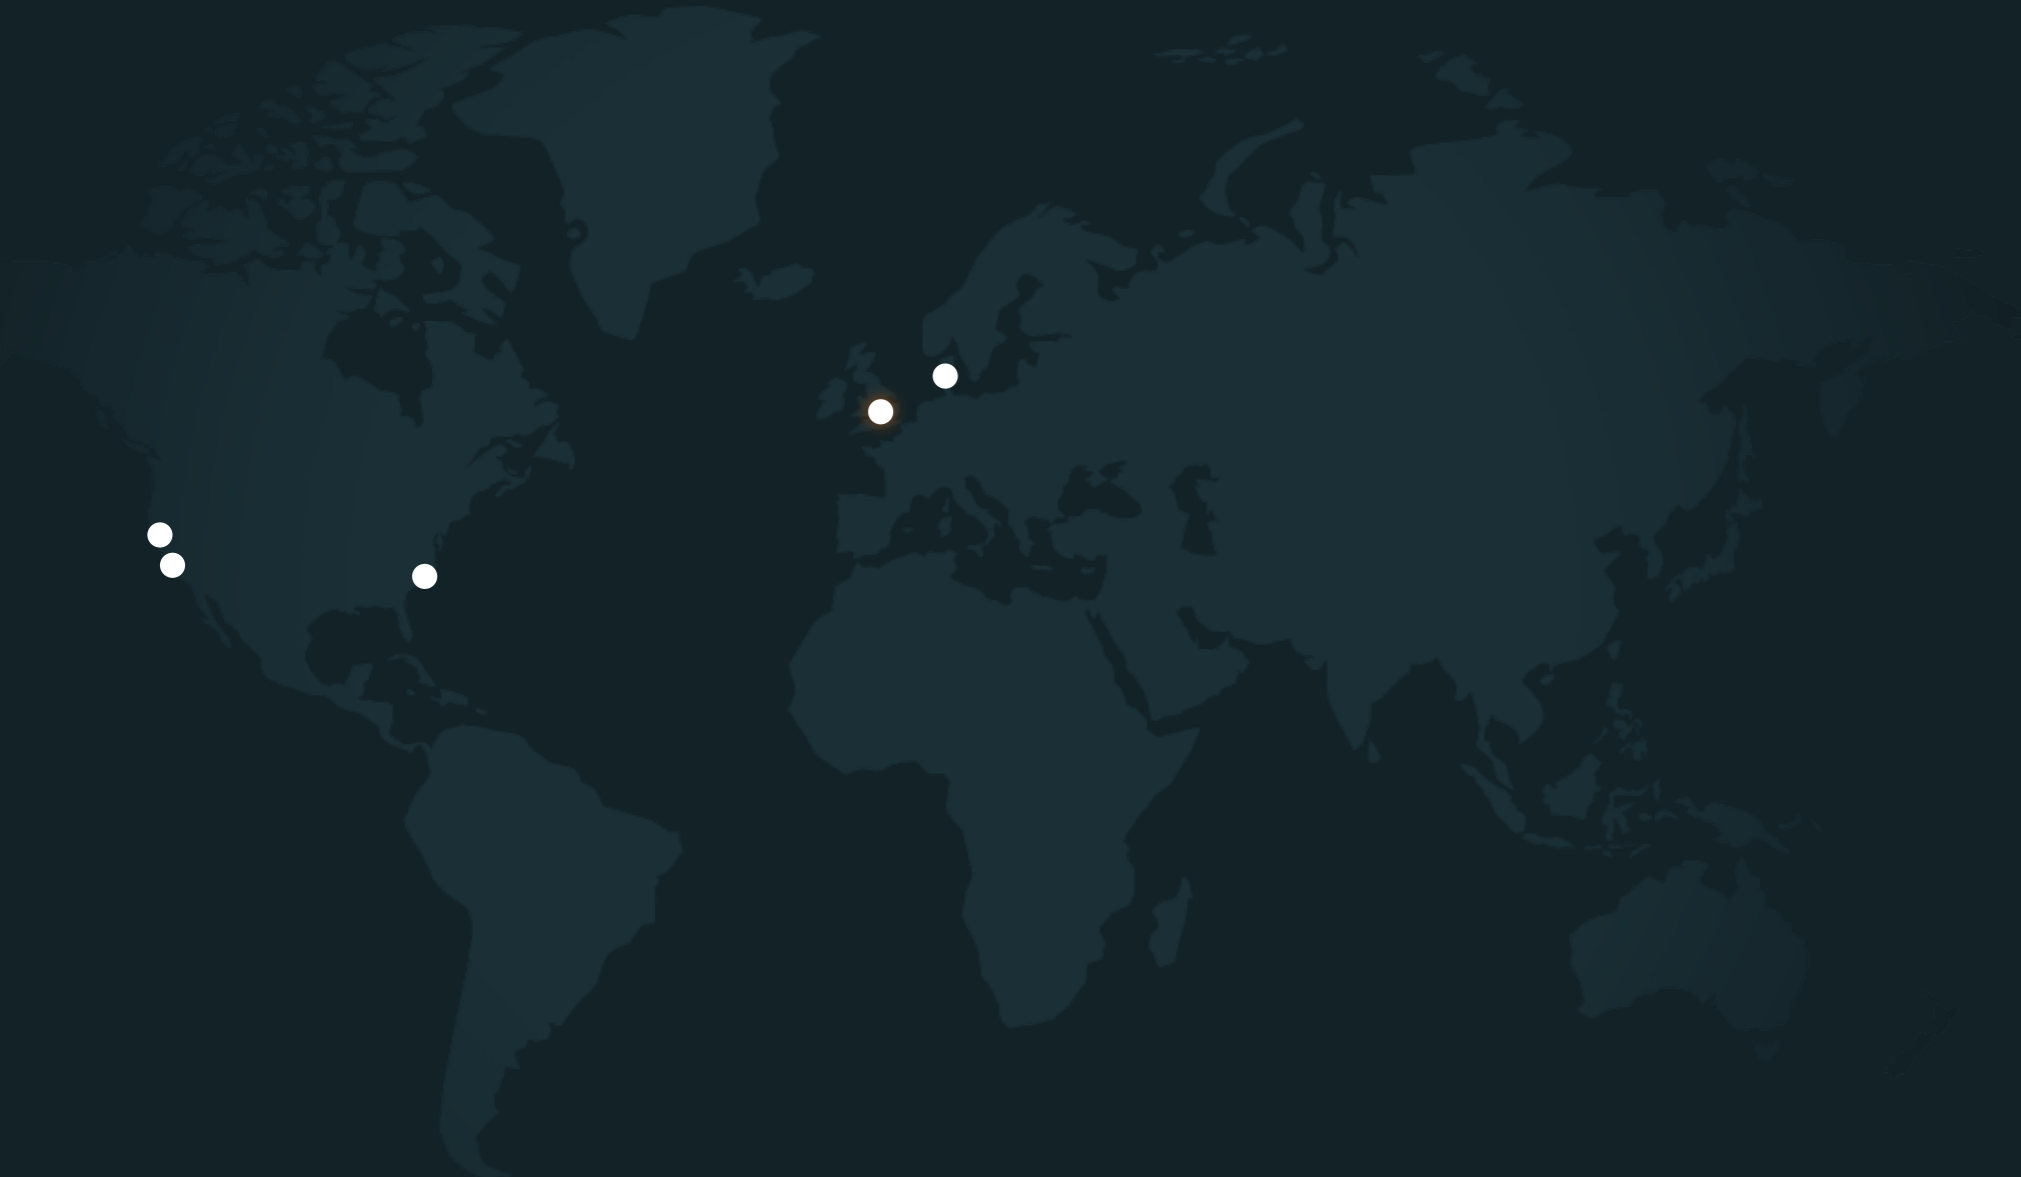

- Creative space for landscape architects and designers to discuss their outdoor projects
- Create your own moodboards or bring your clients to collaborate on ideas.
- A space to inspire creativity in urban terrace design
- Enjoy a complementary cup of coffee

Book a consultation with our team to get expert advice on how the Raaft terrace system can feature in your next project.
